Dear Julio:

Our ship, the Kana Keoki will be in port a few days at Manzanillo in the month of March, 1979. We need to know the station description and gravity value for the nearest reliable land gravity site to the Mexican Navy piers at Manzanillo. The purpose is to provide a drift and tare control value for the sea-gravimeter aboard the ship. We will be doing a sea gravity survey of the Galapagos island platform.

Best regards,

*John*
