Director, Office of International Programs  
National Aeronautics and Space Administration  
1520 H Street, N. W.  
Washington 25, D. C.  
U. S. A.

Dear Sir:

Ing. Ricardo Monges López sent this Institute a copy of a letter addressed to him by Mr. Hugh L. Dryden, Deputy Administrator of NASA, inviting Mexican institutions to participate in the Tiros II experiment.

We are mainly interested in obtaining information from Tiros II for the purpose of learning of the possibilities of obtaining meteorological data in a planetary scale to be used in atmospheric models.

Right now we are engaged in developing an atmospheric model, that takes cloudiness into account, and we are thinking of integrating the resulting equations using, possibly, the best available data.

Very truly yours,

Julián Adem,  
Director,

JA:pmh
